

Pooja Mane

Senior Backend Developer & Team Lead

manepooja0000@gmail.com
9527676118
Nashik-422010

Skills

Frontend

HTML, CSS, JS, Bootstrap, React (Foundational), Tailwind CSS

Backend

PHP (Laravel, CodeIgniter), Node.js (Express), API Design & Integration, Python (automation), Unit & Integration Testing

Databases

MySQL, PostgreSQL, MongoDB

Soft Skills

Communication, Problem-Solving, Adaptability, International Client Management, Agile Team Leadership

DevOps, Tools & Platforms

AWS (EC2), GitHub Actions (CI/CD Automation), Git, Postman, JIRA, GoDaddy, Google Firebase, GitLab, Apache, PHPUnit

AI Tools

ChatGPT, GitHub Copilot, Gemini, Stitch, Antigravity

Education

Sandip Foundation, Nashik
2017 - 2021

BE Computer

KTHM College, Nashik
2015 - 2017

HSC (Science)

Professional Summary

Senior Backend Developer & Team Lead with 4.5+ years of experience architecting scalable ERP, CRM, BFSI and DMS solutions. Proven record of reducing manual effort by 40% through workflow automation and improving sprint efficiency by 20% via structured Agile leadership. Skilled in PHP (Laravel, CodeIgniter), Node.js (Express) and RESTful API design with optimized MySQL queries, alongside PostgreSQL and MongoDB integrations. Experienced in AWS (EC2) deployments, CI/CD automation (GitHub Actions), Docker and compliance ready RBAC systems. Strong background in international client management, KYC workflows and secure payment integrations (Razorpay, BillDesk). Actively leverages AI IDEs and coding assistants (Copilot, Cursor, Gemini) to accelerate debugging, automated testing (PHPUnit).

Work History

Novami Infotech Pvt Ltd

Nashik

Team Leader

Aug 2025 - Present

- Led crossfunctional teams across PHP (Laravel, CodeIgniter 3/4) and Node.js, boosting sprint efficiency by 20% through structured Agile planning.
- Engineered scalable RESTful APIs in Laravel and Node.js (Express), optimizing database interactions and enabling seamless integration across enterprise applications.
- Implemented CI/CD pipelines with GitHub Actions and provisioned AWS EC2 instances, ensuring 99.9% uptime in secure, scalable deployments.
- Collaborated with international clients for requirement gathering, sprint reviews, and production delivery, aligning BFSI/ERP solutions with compliance standards.
- Leveraged AI IDEs and assistants (Copilot, Antigravity, Gemini) to accelerate feature development, reducing repetitive coding tasks by 30% and improving code quality.
- Built a Windows monitoring agent in Python, strengthening system audits and improving operational visibility by 25%.
- Managed endtoend deployments (hosting, domain setup, SSL, performance monitoring), ensuring consistent delivery of Laravel/CodeIgniter modules in live production environments.
- Introduced unit testing frameworks (PHPUnit, Supertest) to validate API endpoints, reducing postdeployment defects by 15%.

Work History

Novami Infotech Pvt Ltd	Nashik
Sr PHP Developer	Apr 2025 - Jul 2025
- Enterprise Portal Architecture: Engineered secure Lab and Maintenance portals with RoleBased Access Control (RBAC) and OTP authentication, streamlining workflows and reducing manual processing time by 40%. - Data Visualization & Inventory Systems: Built interactive dashboards (Chart.js) and automated inventory modules with barcode generation and mobile API integration, improving operational visibility and cutting reconciliation time by 30%. - ECommerce & Database Scaling: Designed transactional ecommerce modules with secure payment layers and optimized MySQL queries, supporting highvolume operations with 99% uptime. - Deployment & Compliance: Managed hosting, configuration, and performance monitoring of responsive web platforms, ensuring accessibility compliance and crossdevice compatibility for public sector clients.	
ESDS Software Solutions Pvt Ltd	Nashik
PHP Developer	Nov 2021 - Apr 2025
- Backend & API Architecture: Developed modular, scalable backend components using PHP/CodeIgniter under MVC architecture, establishing standardized RESTful API endpoints for seamless data exchange. - HighTraffic Optimization: Optimized complex SQL queries and data schemas across MySQL and PostgreSQL, improving responsiveness to reliably support highconcurrency production traffic exceeding lakhs of active users. - System Scalability & Performance: Engineered dataprocessing pipelines and decoupled application layers to eliminate bottlenecks during highvolume traffic spikes, ensuring consistent system stability. - Workflow & Task Automation: Configured customized Linux cron jobs and integrated secure SMTP flows, automating routine tasks and reducing manual operational overhead by 30%. - CrossFunctional Collaboration: Partnered with frontend engineering teams to implement asynchronous user interfaces using HTML5, CSS3, Bootstrap, jQuery, and AJAX. - Agile Frameworks & Lifecycle: Utilized JIRA for structured sprint planning, task prioritization, and proactive defect tracking within fastpaced Agile development cycles.
