PROFESSIONAL SUMMARY

Senior Software Engineer and Team Lead with 4.5+ years of experience building scalable enterprise applications across ERP, CRM, Healthcare, BFSI and workflow domains. Strong expertise in PHP, Laravel, Node.js, NestJS, Express.js, JavaScript, TypeScript, REST APIs and relational databases. Experienced in backend architecture, database optimization, authentication, RBAC, Agile team leadership and delivering secure applications using AWS, Docker and CI/CD.

TECHNICAL SKILLS

Languages: PHP, JavaScript, TypeScript, Python, HTML5, CSS3

Backend: PHP, Laravel, Node.js, NestJS, Express.js, CodeIgniter, RESTful APIs

Frontend: Blade, Bootstrap, Tailwind CSS, jQuery, AJAX

Testing: PHPUnit, Postman, Swagger (OpenAPI), Debugging

Databases and ORM: MySQL, PostgreSQL, MongoDB, Eloquent ORM, Prisma ORM, Sequelize ORM

Authentication and Security: Laravel Sanctum, JWT, Google OAuth, RBAC, OTP Authentication

Architecture: MVC, OOP, Design Patterns, SOLID Principles

DevOps and Tools: Docker, Docker Compose, Git, GitHub Actions, CI/CD, AWS (EC2, S3), Linux, Apache, Firebase, JIRA

PROFESSIONAL EXPERIENCE

Novami Infotech Pvt. Ltd.

Nashik, India

Team Leader

Nov 2025 – Present

- Led cross-functional development teams in designing scalable backend architectures and delivering secure, high-performance enterprise applications using PHP, Laravel, Node.js, NestJS, Express.js and Next.js within Agile environments.
- Architected and developed secure RESTful APIs using Laravel, NestJS and Express.js, implementing modular architecture, reusable services, middleware-driven request handling and Swagger (OpenAPI) documentation.
- Designed and optimized relational database schemas using PostgreSQL and MySQL with Prisma and Eloquent ORM, ensuring data integrity, efficient query performance and scalable data access.
- Implemented secure authentication and authorization using JWT, Google OAuth and Role-Based Access Control (RBAC), strengthening application security across enterprise systems.
- Integrated Firebase, email services, AWS S3 and third-party APIs to support real-time functionality, automated notifications, file management and business workflows.
- Partnered with international clients and cross-functional teams on requirements analysis, solution design, sprint planning and delivery while mentoring developers, conducting code reviews and driving engineering best practices.

Senior Backend Developer

Apr 2025 – Oct 2025

- Developed and maintained scalable enterprise applications using PHP, Laravel and CodeIgniter, following MVC architecture and Object-Oriented Programming (OOP) principles.
- Designed and implemented secure RESTful APIs using Laravel middleware, Form Request validation, database migrations, authentication, authorization and third-party integrations.
- Implemented Role-Based Access Control (RBAC) and OTP-based authentication while applying automated PHPUnit testing to validate backend functionality and APIs.
- Optimized MySQL queries, database indexing, Eloquent ORM operations and backend logic to improve application performance and scalability.
- Managed application deployments, Linux server configuration, SSL setup and CI/CD pipelines to improve deployment reliability and operational efficiency.
- Collaborated with cross-functional teams, business stakeholders and QA engineers throughout the Software Development Life Cycle (SDLC) using Agile methodologies.

- Developed and maintained scalable enterprise applications using PHP and CodeIgniter, following MVC architecture and Object-Oriented Programming (OOP) principles.
- Built secure RESTful APIs and integrated third-party services to support enterprise application workflows.
- Optimized MySQL and PostgreSQL queries, database schemas and indexing strategies for high-concurrency production environments serving lakhs of active users.
- Implemented scalable backend modules and automated business workflows to improve application reliability and performance.
- Configured Linux Cron Jobs and SMTP Email Services to automate scheduled processes, notifications and business workflows.
- Collaborated with frontend developers to build responsive web interfaces using HTML5, CSS3, JavaScript, Bootstrap, jQuery and AJAX.
- Participated in the complete Software Development Life Cycle (SDLC), utilizing JIRA for sprint planning, defect tracking and Agile collaboration.

TECHNICAL HIGHLIGHTS

- **Enterprise Scale:** Designed and optimized backend applications, database queries and architectures supporting high-concurrency enterprise workloads with 100,000+ active users.
- **Backend Architecture:** Architected scalable PHP/Laravel and Node.js/NestJS backends using modular architecture, reusable services, middleware and secure RESTful APIs.
- **CI/CD Automation:** Engineered automated deployment pipelines using GitHub Actions, reducing production release time by approximately 66%, from 30 minutes to under 10 minutes.
- **Docker Containerization:** Containerized PHP and MySQL development environments using Docker and Docker Compose, standardizing local setups and eliminating host dependency issues.
- **Infrastructure Monitoring:** Developed and deployed a Python-based system monitoring agent to automate infrastructure audits and monitor user activity logs, improving operational visibility and reducing manual effort.
- **On-Premise Deployment:** Executed end-to-end deployment of a PHP application on a client-side local network server, configuring Apache, PHP, MySQL and the production environment.

EDUCATION

Bachelor of Engineering (B.E.) in Computer Engineering*Savitribai Phule Pune University***Nashik, Maharashtra***2017 – 2021*
